MakeLeaps Announces Evernote Integration

Today, MakeLeaps (Webnet IT Corporation) announces integration of its online quoting/invoicing service serving freelancers, business and enterprise, with Evernote, a popular service that allows people to save their notes, ideas, projects and experiences on any computer or phone they use.

Availability

This Evernote integration is immediately available to all MakeLeaps subscription plan users, from Scooter plan and above.

Value To Users in Japan

This integration allows MakeLeaps users to automatically sync their quotes and invoices into a Notebook in their Evernote account. Further, MakeLeaps users are able to sync all saved documents, or only documents with specific tags.

Special Evernote Integration Offer - 1 Month Cashback Offer

From today, all users that upgrade to a MakeLeaps paid subscription plan up to and including Wednesday, 24th of April, 2013 will receive immediate access to the Evernote integration feature in their MakeLeaps account, and a refund for the 1st month of their MakeLeaps plan.

Quote from Jason Winder, Founder of MakeLeaps

"Evernote was a very natural integration for us. Because Japan has a huge user-base of Evernote users, there are many MakeLeaps users who also use Evernote. As such, an Evernote integration was a very commonly requested feature. This new integration will allow people to keep an up-to-date record of all their quotes and invoices in their Evernote account, and easily search and find them through Evernote."

About MakeLeaps

MakeLeaps is online invoicing software enabling several thousand freelancers, business and enterprise to create, send and manage their documents. Over 95% of our user-base are located in Japan. MakeLeaps has a free plan with limited features for up to 5 clients, and our popular Send By Post feature enables our users to send their quotes and invoices anywhere in Japan for only ¥199.
